

# Customer Feedback Analysis and Improvement

Comprehensive Analysis using SQL, Data Warehousing, Python

# Project Brief

This project aims to analyze customer reviews of British airline customers using data science techniques in order to gain insights used to identify areas of improvement.

# The Phases

- create database using SQL database and collecting data.

- cleanse the collected data using python data processing.

- load the cleanse data into data warehouse.

- obtain insights to identify areas of improvement.

# PHASE 1: CREATING DATABASE

- Database creation : using SQL server to create database used to store customer feedback.
- Table definition : defining a table within the database to hold the customer feedback:  
( specifying columns & data type ).
- Importing the dataset : the dataset CSV file is imported to the database.

# PHASE 1: CREATING DATABASE

```
CREATE TABLE [dbo].[CustomerReview1](
    [ID] [smallint] NULL,
    [OverallRating] [tinyint] NULL,
    [ReviewHeader] [nvarchar](100) NULL,
    [Name] [nvarchar](50) NULL,
    [Datetime] [date] NULL,
    [VerifiedReview] [bit] NULL,
    [ReviewBody] [varchar](max) NULL,
    [TypeOfTraveller] [nvarchar](50) NULL,
    [SeatType] [nvarchar](50) NULL,
    [Route] [nvarchar](50) NULL,
    [DateFlown] [date] NULL,
    [SeatComfort] [tinyint] NULL,
    [CabinStaffService] [tinyint] NULL,
    [GroundService] [tinyint] NULL,
    [ValueForMoney] [tinyint] NULL,
    [Recommended] [bit] NULL,
    [Aircraft] [nvarchar](50) NULL,
    [Food_Beverages] [tinyint] NULL,
    [InflightEntertainment] [tinyint] NULL,
    [Wifi_Connectivity] [tinyint] NULL
) ON [PRIMARY] TEXTIMAGE_ON [PRIMARY]
GO
```

# PHASE 2 : DATA CLEANSING USING Python

- using ETL process to cleanse the dataset :
- Data extraction: the dataset is extracted from the database in SQL server to Python to capture the necessary data for the cleansing process
- Data transformation : the extracted data using transformation techniques in Python is now used to handle missing values and correct data types
- Data validation : after the transformation a validation techniques is applied to identify and remove duplicates, outliers, and incorrect formats
- the cleanse and transformed data will be then loaded to different database.

# Dataset Before Cleansing:

- visuals of the captured data before the transformation process

```

# PHASE 4 : Warehousing

- Data Warehouse creation : using SQL server to create data warehouse used to customer feedback analysis.
- Table definition : defining the fact table and Dimensions tables.
- Extracting the data from database into the new data warehouse using SSIS.

# PHASE 4 : Warehousing

# PHASE 4 : Warehousing

The screenshot displays the SQL Server Data Tools (SSDT) interface. The main window shows a Data Flow Task (DFT) in design mode. The DFT has two data sources: 'Customer Review DB' and 'Customer Review DWH'. The 'Customer Review DWH' data source is highlighted, and the 'OLE DB Destination Editor' dialog box is open, showing the mapping of input columns to destination columns.

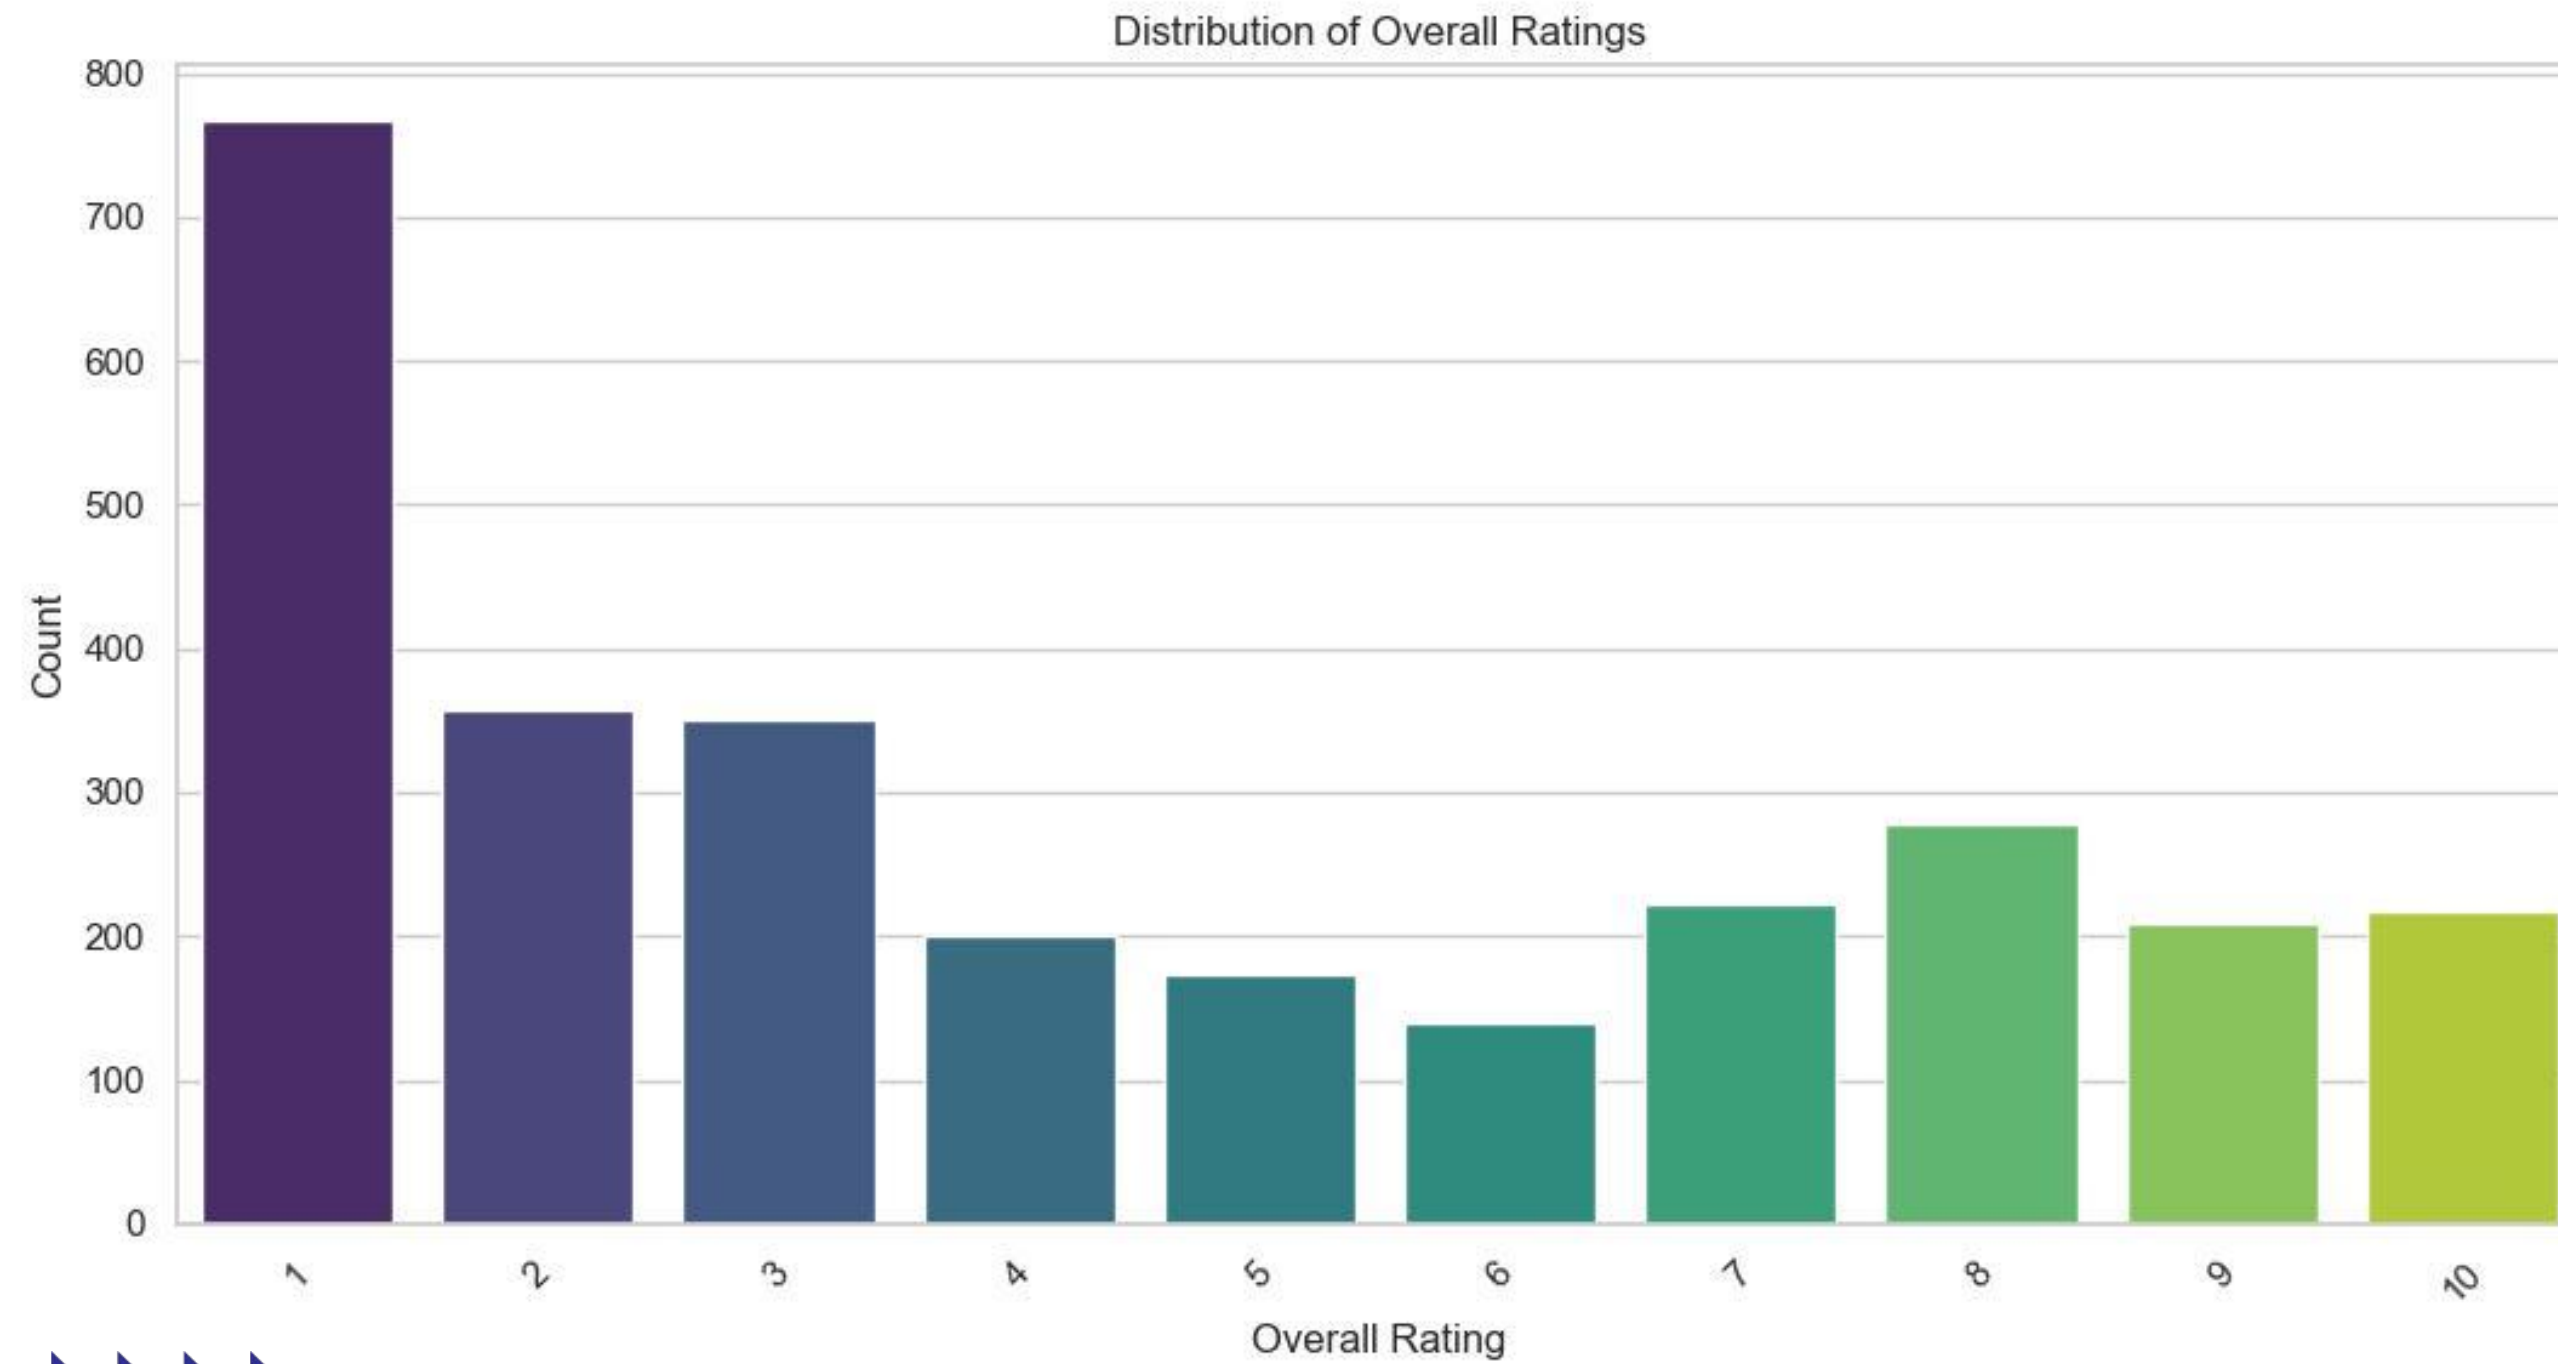

The 'OLE DB Destination Editor' dialog box is titled 'Configure the properties used to insert data into a relational database using an OLE DB provider.' It contains a 'Connection Manager' section on the left, which is currently empty. The main area is divided into two panes: 'Available Input Columns' and 'Available Destination Columns'. The 'Available Input Columns' pane lists the following columns: Name, OverallRating, Name, Datetime, VerifiedReview, TypeOfTraveller, SeatType, Route, DateFlown, SeatComfort, CabinStaff Ser..., and GroundService. The 'Available Destination Columns' pane lists the following columns: Name, CustomerID, ReviewID, Datetime, OverallRating, SeatComfort, CabinStaff Service, GroundService, ValueForMoney, Recommended, TravellerTypeID, and SeatTypeID. Lines connect the input columns to the destination columns, indicating the mapping. Below the panes, there is a table with two columns: 'Input Column' and 'Destination Column'. The table contains the following rows:

Input Column	Destination Column
<ignore>	CustomerID
<ignore>	ReviewID
Datetime	Datetime
<ignore>	OverallRating

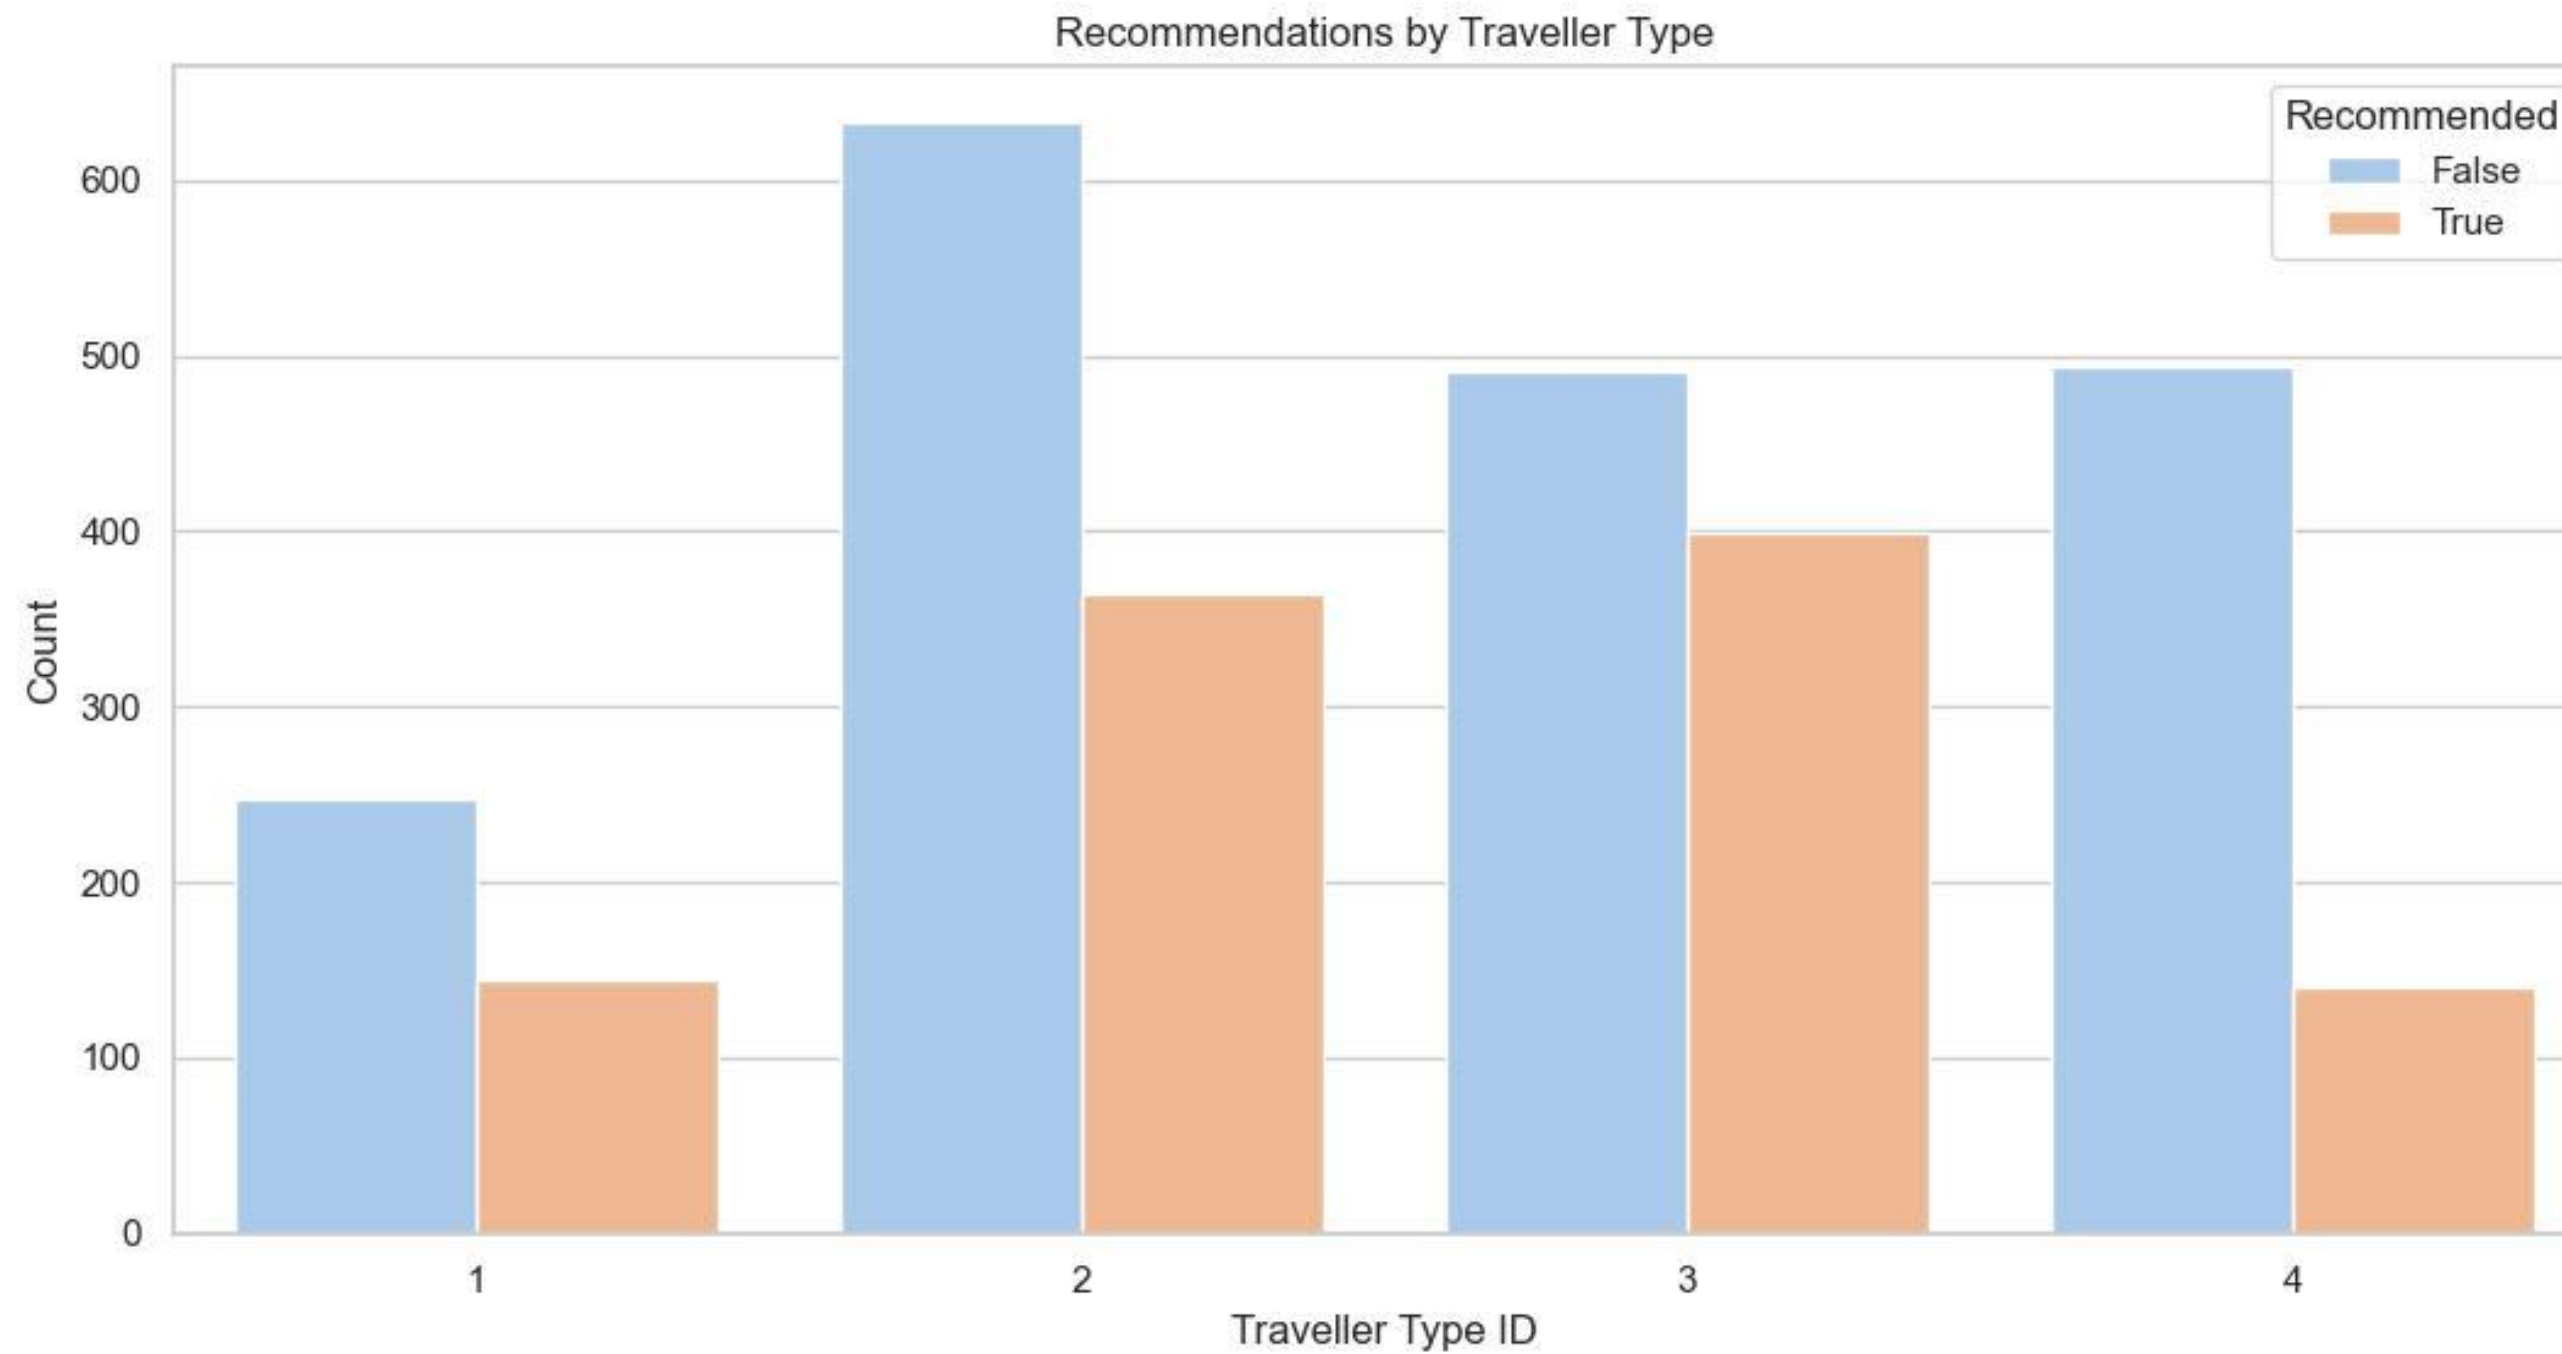

The bottom status bar of the SSDT window indicates 'Package execution completed with success. Click here to switch to design mode, or select Stop Debugging from the Debug menu.'
